## Technical Data Sheet

| Measuring Items                             | Limits                       |
|---------------------------------------------|------------------------------|
| Appearance                                  | colorless transparent liquid |
| N-propyl acetate, w/%                       | $\geq 99.5$                  |
| N-propyl alcohol, w/%                       | $\leq 0.10$                  |
| water, w/%                                  | $\leq 0.10$                  |
| Acidity (as acetic acid), w/%               | $\leq 0.01$                  |
| Evaporation residue, w/%                    | $\leq 0.005$                 |
| Density ( $\rho$ )/(g/cm <sup>3</sup> )     | 0.883–0.888                  |
| Chromaticity/Hazen Unit (Pt-Co color scale) | $\leq 10$                    |

## Use to

1. It has excellent solubility for various synthetic resins and is an effective solvent for many synthetic resins such as ethyl cellulose, nitrocellulose, styrene, methacrylate resin, etc.
2. It is commonly used for organic synthesis, as a solvent for paint, printing ink, etc.
3. It is also used as a common industrial dehydrating agent.
